quite simply test driven development is meant to eliminate fear in application development while some fear is healthy often viewed as a conscience that tells programmers to be careful the author believes that byproducts of fear include tentative grumpy and uncommunicative programmers who are unable to absorb constructive criticism when programming teams buy into tdd they immediately see positive results they eliminate the fear involved in their jobs and are better equipped to tackle the difficult challenges that face them tdd eliminates tentative traits it teaches programmers to communicate and it encourages team members to seek out criticism however even the author admits that grumpiness must be worked out individually in short the premise behind tdd is that code should be continually tested and refactored kent beck teaches programmers by example so they can painlessly and dramatically increase the quality of their work
